

Product demonstrations

P1 · Public software-interface evidence · Videos embedded in the Final Codex deck

See the implemented product interfaces. These two videos are extracted without modification from NVIDIA_Grand_Challenge_Omelet_Final_Codex.html. They demonstrate visible application screens and product workflows; the tables identify exactly what each segment shows.

1. OI Factory → OI Studio → OI Foundry · 34 seconds

[Open MP4 directly ↗](#)

SEGMENT	VISIBLE IMPLEMENTATION	WHAT IT SUPPORTS
0:00–0:10 · Factory	Project workspace and customer-problem workflow; reusable OCP / application-kit representation.	Product workspace and workflow implementation. Asset accumulation is explained within the composed walkthrough.
0:10–0:20 · Studio	IDE with chat, problem configuration and result area.	An interface for exploring and inspecting optimization tasks.
0:20–0:27 · Foundry / routing	Customer-specific routing/TMS interfaces: Taejeon and Freshway B.	Distinct application surfaces built around routing capabilities.
0:27–0:34 · Foundry / scheduling	Nurse-scheduling application screens: Saebit and Onnuri; comparison of customer interfaces.	Implemented scheduling UI and customer-specific workflow variations. These names are not asserted to identify CAU Hospital.

2. Industrial application examples · 14 seconds

[Open MP4 directly ↗](#)

SEGMENT	APPLICATION	STATUS STATED IN THE SOURCE DECK
0:00–0:03	GS Retail routing	Paid production · company-confirmed
0:03–0:06	Hyundai Glovis stowage	Paid production · company-confirmed
0:06–0:08	Airport operations	Technical validation
0:08–0:10	Parking allocation	Live site · OI validation
0:10–0:12	Logistics optimization	Technical validation
0:12–0:14	Defense logistics	Technical validation

Evidence scope

The public videos show software interfaces and product workflows, providing concrete implementation evidence beyond architectural diagrams. They are edited/composed demonstrations, not an independently observed end-to-end acceptance test. Customer commercial and operating statuses are confirmed by Omelet; confidential customer records are not exposed. The videos do not establish that NVIDIA cuOpt is already the production backend.
