

Convenience Retailer K · Automated Store Ordering

CS-I-1 · Inventory · Project validation

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Convenience Retailer K	Inventory	Project validation

Reported outcome

–36% — average inventory value held per store, per month

36% is lower inventory value held, not automatically a 36% operating-cost reduction. The source separately reports approximately \$4,200/store/month in inventory operating-cost savings; detailed accounting is confidential.

Problem and solution

Order just enough at each store — less waste, fewer empty shelves.

Per-store demand forecast + MILP to minimize inventory cost, stockout and waste while maximizing operating efficiency at equal sales.

Model / method: Forecast + MILP.

Comparison and measurement scope

Existing store ordering versus forecast-driven ordering; inventory value per store/month.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

A forecast-and-ordering engine that produces each store's daily order automatically, per item and per store.

Delivery form: Forecast + ordering API, Per-store auto-ordering.
