

Retail A · Perishable Ordering: Stockout–Waste Balance

CS-I-2 · Inventory · Project validation

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Retail A	Inventory	Project validation

Reported outcome

–73% stockout rate · –43% waste quantity

Stockout rate: 15% to 4% (11 percentage points; 73.3% relative reduction). Weekly waste quantity per store: 56 to 32 (42.9% lower). These inventory results are distinct from routing cost savings and cuOpt experiments.

Problem and solution

Balance running out against throwing away for short-life dairy.

Present optimal trade-off points between stockout and waste for short-shelf-life items; the operator chooses the final order pattern.

Model / method: AI forecast + MO-MILP.

Comparison and measurement scope

Existing ordering versus the selected stockout/waste policy for short-life products.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

An ordering tool that shows the stockout-vs-waste options so the operator picks a balance and keeps re-ordering to it.

Delivery form: Ordering agent, Trade-off explorer dashboard.
