

Automotive Logistics B · Vehicle-Carrier Ship Stowage

CS-P-3 · Packing · Paid production · company-confirmed

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

Reported outcome

> 85% — reduction in optimization time

More than 85% reduction is the reported optimization-time result. It is not a vessel-capacity uplift; the public summary does not disclose the underlying timing series.

Problem and solution

Auto-generate a plan that maximizes loading & unloading efficiency while honoring 50+ complex constraints. Maximize ship operating efficiency with AI + metaheuristics that generate and iteratively refine optimal vehicle placement.

Model / method: AI + metaheuristics.

Comparison and measurement scope

Existing/manual stowage planning versus optimization-assisted planning.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

A stowage-planning app the team runs per voyage to generate and then fine-tune the vehicle load plan.

Delivery form: Stowage-planning app, Solver engine.
