

Delivery Platform D · Real-Time Delivery Routing

CS-R-1 · Routing · Project validation

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Delivery Platform D	Routing	Project validation

Reported outcome

–13% rider travel distance · –22% customer delivery time

Reported reductions apply to this test, not all delivery operations.

Problem and solution

Get every order to customers faster while riders drive less.

Real-time optimal order assignment and routing for delivery riders, validated live on the client's platform to improve delivery efficiency and service quality.

Model / method: PDP-X.

Comparison and measurement scope

Live test: 1,000+ orders, 30 riders, three hours; compared with Google OR-Tools.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

Runs in production as a routing API — the dispatch system calls it live, re-optimizing assignments and routes as each new order arrives.

Delivery form: Real-time routing API, Live dispatch engine.
