

Pharmaceutical Distributor E · Pharmaceutical Delivery Optimization

CS-R-2 · Routing · Project validation

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Pharmaceutical Distributor E	Routing	Project validation

Reported outcome

–45% — completion time (Case 2, re-balance) · up to –24% fuel cost

Keep scenarios separate: Case 1 reports 24% lower fuel cost / 21% shorter completion time; Case 2 reports 20% / 45%. The best figures are not from one scenario.

Problem and solution

Spend less on fuel and finish the delivery day earlier.

Cut fuel cost and completion time for pharmacy deliveries — offered as two options: keep each driver's territory, or let Omelet re-balance it.

Model / method: Route optimization.

Comparison and measurement scope

Existing routes versus visiting-order optimization (Case 1) or territory rebalancing plus route optimization (Case 2).

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

Delivered as a routing solver the planning team runs each day — compare the 'keep territories' and 're-balance' options and choose per route.

Delivery form: Route-optimization solver (API), Scenario comparison.
