

Logistics Provider F · Middle-Mile Dispatch Optimization

CS-R-3 · Routing · Capability validation

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Logistics Provider F	Routing	Capability validation

Reported outcome

Meets diverse KPIs — one engine flexibly balances cost, load factor and driver preference for each operation

Qualitative capability evidence. No numerical uplift or paid-production status is inferred.

Problem and solution

Lower dispatch cost while keeping trucks full and drivers on good routes.

Automate dispatcher work and maximize driver satisfaction through scenario-based optimal dispatch that respects real operating constraints.

Model / method: Capacitated VRP.

Comparison and measurement scope

Scenario-based dispatch with progressively added operational constraints.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

A dispatch API plus a scenario dashboard — planners tune what to prioritize and re-run as operations change, day to day.

Delivery form: Dispatch API, Scenario dashboard.
