

Automaker G · Route & Carrier Optimization

CS-R-4 · Routing · Opportunity analysis

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Automaker G	Routing	Opportunity analysis

Reported outcome

~900 routes — 12% of ~7,500 active routes identified for improvement

12% is the share of routes with improvement potential, not a 12% realized cost saving.

Problem and solution

Move every part to its dealer at the lowest possible logistics cost.

Minimize logistics cost by combining route search with situation-specific carrier assignment across a complex multi-tier supply chain.

Model / method: Min-Cost Flow.

Comparison and measurement scope

Approximately 900 of 7,500 active routes were identified as improvable.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

An optimization API with a scenario simulator — planners edit the rules in plain language and the whole network re-optimizes on demand.

Delivery form: Optimization API, Scenario simulator, NL constraint editor.
