

Logistics Provider H · Integrated Allocation & Vehicle Dispatch

CS-R-5 · Routing · Project validation

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Logistics Provider H	Routing	Project validation

Reported outcome

2 hrs → 1 sec — planning time · –20% hired-vehicle cost

The one-second figure is solver planning time; the two-hour reference describes manual work. Hired-vehicle cost is a separate KPI.

Problem and solution

Decide what goes where and on which truck — instantly and error-free.

Jointly optimize volume-to-warehouse allocation and vehicle dispatch to minimize transport plus warehouse operating cost and eliminate manual error.

Model / method: MILP.

Comparison and measurement scope

Compared with manual, separately planned allocation and dispatch.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

A solver the planning system calls to generate the warehouse-allocation and truck-dispatch plan on demand, in seconds.

Delivery form: Allocation + dispatch solver (API).
