

Beauty Retailer J · Order–SKU Batching for Packing

CS-S-1 · Scheduling · Project validation

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
Beauty Retailer J	Scheduling	Project validation

Reported outcome

–57.9% — average processing time · load-balancing deviation –30%

Reported 57.9% lower average processing time and 30% lower load-balancing deviation. Production adoption is not inferred from this benchmark.

Problem and solution

Pack orders faster by spreading the work evenly across stations.

Distribute SKUs across packing queues to minimize packing time and balance workstation load (Open Job-Shop + Batching).

Model / method: Open Job-Shop.

Comparison and measurement scope

Existing workstation allocation; three weeks of history, 400K orders, 20K SKUs and 36 packing queues.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

A batching solver that runs on each day's orders to assign SKUs across workstations — a full plan in seconds.

Delivery form: Batching solver (daily API).
