

University Hospital C · Nurse Rostering Optimization

CS-S-2 · Scheduling · Paid production · company-confirmed

Company-confirmed · confidential customer records. Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality.

CUSTOMER	CAPABILITY	EVIDENCE STAGE
University Hospital C	Scheduling	Paid production · company-confirmed

Reported outcome

2 wks → 90 sec — schedule-generation time

Two weeks refers to the manual workflow; 90 seconds is draft generation, not the complete review/approval process. The press article supports product capability while keeping the hospital anonymous.

Problem and solution

Build fair, rule-abiding nurse schedules in minutes, not weeks.

Ward-specific MILP scheduling that raises hospital operating efficiency and maximizes staff satisfaction.

Model / method: CP / MILP.

Comparison and measurement scope

Manual monthly roster preparation versus automated draft generation.

Source: Omelet case-study portfolio. Public summary prepared 17 September 2026. Underlying measurement dates, raw logs and detailed customer analysis are confidential. These are customer-project results; NVIDIA cuOpt use is not inferred.

Implemented delivery

A scheduling app the head nurse runs each month, with a feedback loop to adjust preferences and instantly re-generate.

Delivery form: Scheduling app, Planner feedback loop.
