

Customer case studies

CS · Anonymous public summaries · Company-confirmed results · 12 cases

12 customer-project summaries across four optimization capabilities. These public summaries explain the operational problem, solution and company-confirmed outcome, with customer names and logos removed.

Results have been internally validated by Omelet. Customer identities are anonymized, and underlying customer data and detailed validation reports are not publicly disclosed to protect customer confidentiality. Internal validation is company confirmation, not an independent audit. Projections and measured results are distinguished below; project validation does not imply paid production.

CASE / CUSTOMER	APPLICATION	REPORTED OUTCOME	EVIDENCE STAGE
<u>R-1 · Delivery Platform D</u>	Real-Time Delivery Routing	–13% rider travel distance · –22% customer delivery time	Project validation
<u>R-2 · Pharmaceutical Distributor E</u>	Pharmaceutical Delivery Optimization	–45% — completion time (Case 2, re-balance) · up to –24% fuel cost	Project validation
<u>R-3 · Logistics Provider F</u>	Middle-Mile Dispatch Optimization	Meets diverse KPIs — one engine flexibly balances cost, load factor and driver preference for each operation	Capability validation
<u>R-4 · Automaker G</u>	Route & Carrier Optimization	~900 routes — 12% of ~7,500 active routes identified for improvement	Opportunity analysis
<u>R-5 · Logistics Provider H</u>	Integrated Allocation & Vehicle Dispatch	2 hrs → 1 sec — planning time · –20% hired-vehicle cost	Project validation
<u>P-1 · Logistics Provider F</u>	Box-Size Optimization	2 wks → 1.5 hrs — box-optimization time · packing 40 ms → 0.8 ms	Project validation
<u>P-2 · Variety Retailer I</u>	Nesting-Aware Box Optimization	≈ \$660K / yr — projected savings with a tailored algorithm	Projection + project validation
<u>P-3 · Automotive Logistics B</u>	Vehicle-Carrier Ship Stowage	> 85% — reduction in optimization time	Paid production · company-confirmed
<u>S-1 · Beauty Retailer J</u>	Order–SKU Batching for Packing	–57.9% — average processing time · load-balancing deviation –30%	Project validation
<u>S-2 · University Hospital C</u>	Nurse Rostering Optimization	2 wks → 90 sec — schedule-generation time	Paid production · company-confirmed
<u>I-1 · Convenience Retailer K</u>	Automated Store Ordering	–36% — average inventory value held per store, per month	Project validation
<u>I-2 · Retail A</u>	Perishable Ordering: Stockout–Waste Balance	–73% stockout rate · –43% waste quantity	Project validation

How these cases support the submission

Read these summaries alongside [the technical report](#) for controlled engine comparisons and [the product videos](#) for visible implementation. Customer outcome KPIs are not substituted for technical solver metrics. Multiple cases may belong to the same anonymous customer; twelve cases do not mean twelve additional customers.
